

Armour Meal Planning - Project Outline

Purpose

Create a application where user can search or browse by food item, meal type, ingredient, or generate a random recipe, review a list of recipes and save them to a meal plan based on date.

Audience

Busy people who want to simplify meal planning. People who suffer from decision fatigue.

Data Sources

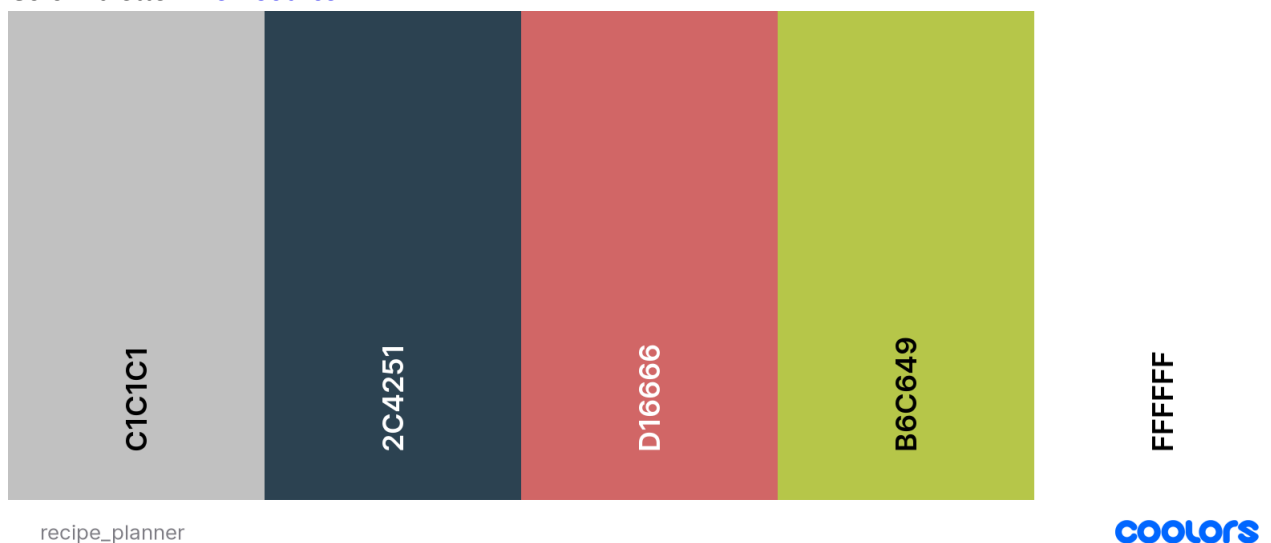

- WebKnox Recipe API - [view source](#)
- Local Storage

Initial Module List

- Search
- generateRandom
- apiConnect
- storage
- myRecipes
- myPlan
- editPlan

Colors/Styling

- Color Palette - [view source](#)

- Fonts - [view source](#)
 - Headings: Exo 2
 - General: Nanum Gothic

Basic Timeline

- **week 1:**
 - Complete planning
 - build html
 - basic styling
 - basic folder structure / module bones
- **week 2:**
 - fill in initial modules
 - build api connection
 - create storage functions
- **week 3:**
 - implement browse
 - implement search and edit
 - begin testing
- **week 4:**
 - finalize design
 - finalize functionality
 - complete testing
 - deploy live
